Our aim was to determine whether CRP predicts (1) all-cause mortality and (2) occurrence of major cardiovascular events (myocardial infarction and/or stroke) in patients with Type 2 diabetes and cardiovascular disease. We used a secondary analysis of data from a large cohort of patients with Type 2 diabetes, treated with antiplatelet or statin therapy in The James Cook University Hospital, Huddersfield, UK (n=1593). Fasting plasma CRP was measured in all patients. The follow-up period was 60 months. Survival analysis was performed using the Kaplan-Meier method. Cox regression analysis was used to determine the predictors of all-cause mortality and cardiovascular events. A total of
